

Developer Community Dilemma

Yo!

I'm **Conrad**

Everything Developer Ecosystems.
No longer love sushi (ate too much)!

**There's no table of contents for today. Let's
just assume you're a SaaS developer
product company.**

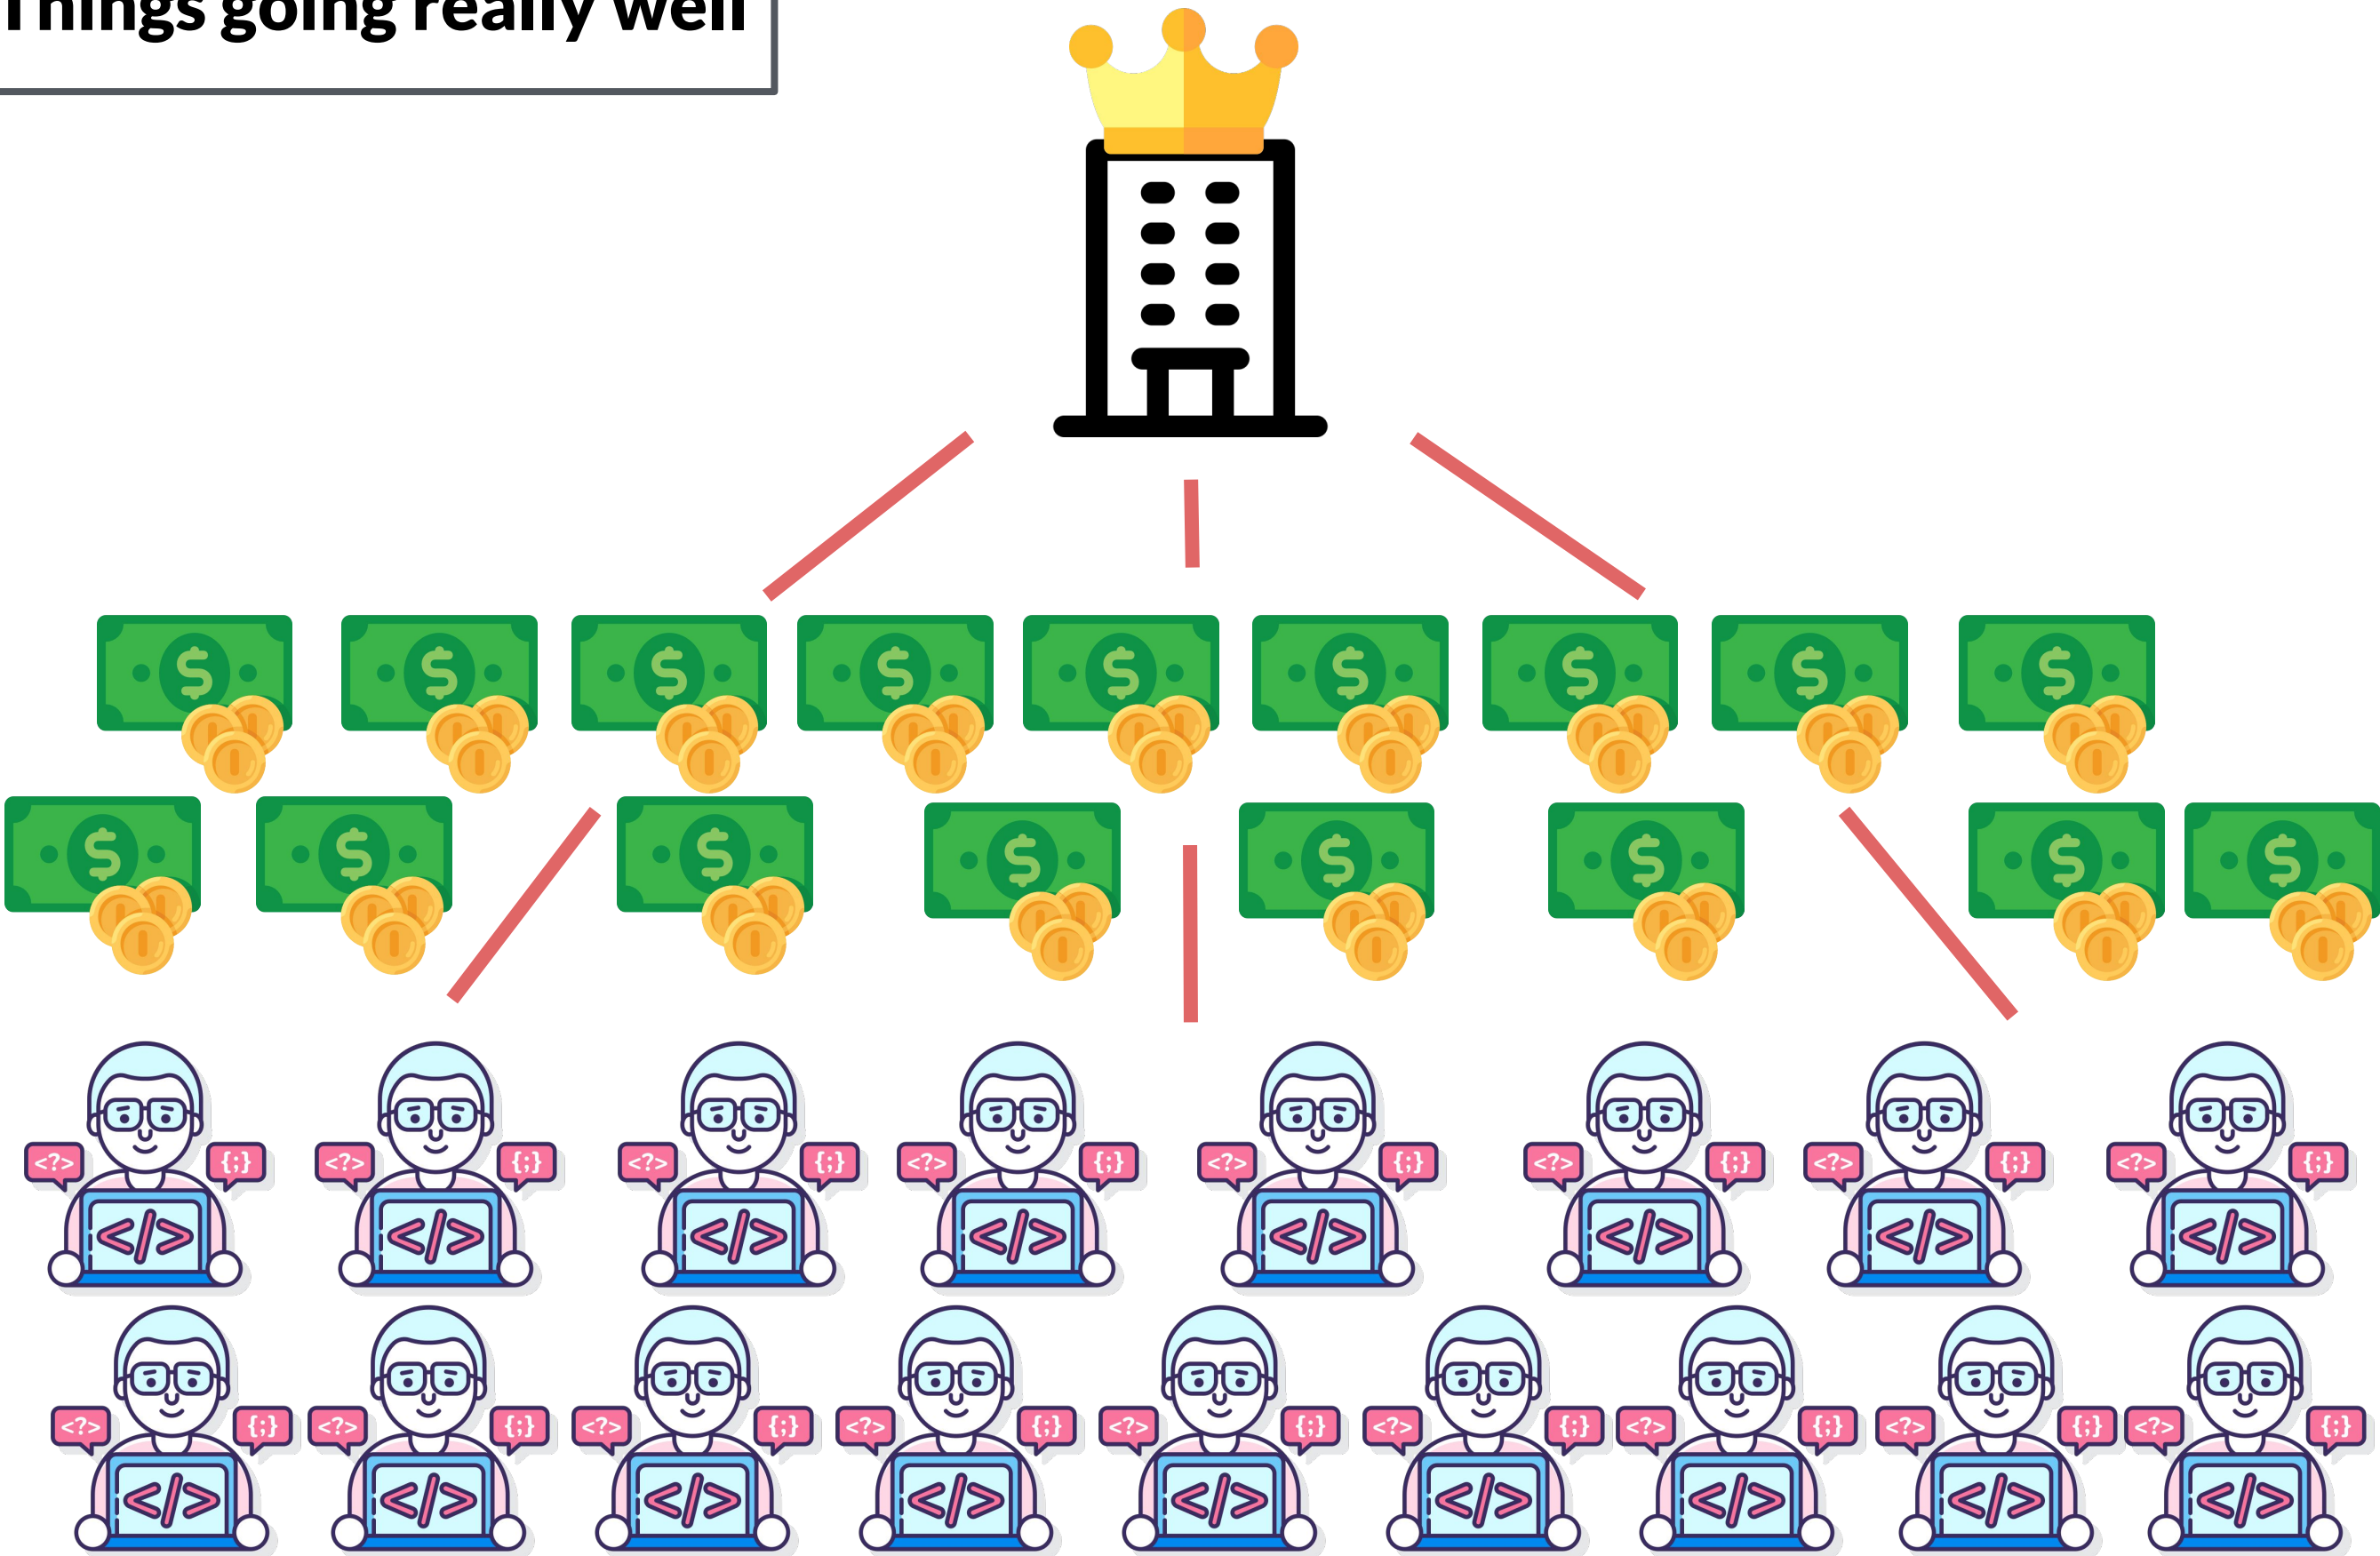

You just started the thing

Things started
progressing

Things going really well

World starts collapsing

Then reality happens. Your SDKs aren't perfect. Neither your APIs. Docs also lacks stuff. More product requests coming in.

I want to get for what I pay phase

I'm paying more and more money. I don't want only more features but also better developer support for me and my developers!

Sure! Can do that - phase

Sure! We have technical
account managers,
developer support
engineers! We'll provide
you with your personal
ones as you're our
enterprise customer!

Oh shit! - phase start

Our pricing says for
paying tiers we offer
support + for enterprise
customer dedicated
support. Then we need to
do that!

Oh shit! - full phase

Ohhh shit! I will need to have at least twice as much support people as customers and that's just support people. How am I gonna pay them so I can also earn money?

**Stack Overflow, Companies with tons of
developer products like Microsoft,
Salesforce, Atlassian etc.**

**Your developers' success isn't scalable
without successful developer community.
So isn't your revenue.**

Good luck.
